

**LESSON - 12**

# **CSS Position**

CSS position property ek element ko page me kaise place karna hai ye decide karta hai. Iske 5 main types hote hain:

- Static - ( Default )
- Relative
- Absolute
- Fixed
- Sticky

## **Static - (Default)**

1. Default position hoti hai.
2. top, left, right, bottom kaam nahi karte.

## **Relative -**

- Apni normal jagah ke hisaab se move hota hai.
- top, left, right, bottom ka use kar sakte hain.

## **Absolute -**

1. Nearest position parent ke respect me set hota hai.
2. Agar parent me position: relative hai to uske according place hota hai.

## **Fixed -**

- Viewport ke according set hota hai.
- Scroll karne par bhi wahi rehta hai.
- Mostly header, sidebar, or chat box ke liye use hota hai.

## **Sticky -**

1. Scroll ke according change hota hai.
2. Jab tak scroll nahi hota, normal position me rehta hai.
3. Scroll hone par fixed jaisa behave karta hai.
