

LESSON - 4

CSS Box Model

CSS me box-sizing ek property hai jo ki element ki height & width ko calculate karke control karti hai. Eska use karne se layout consistency bani rahti hai and responsive design (device view) create karna bhi aasan hota hai

Types of property :

1. content-box (default)

- Esme height & width only content ke liye hoti hai.
- padding & border ko height & width me merge nhi hoti.

Syntax :

width + left + right (padding) + left + right (border) = total width of content box

height + top + bottom (padding) + top + bottom (border) = total height of content box

2. border-box

Content ki height & width me padding and border merge hoti hai.

Syntax :

width (fixed, padding and border included)

height (fixed, padding and border included)
