

LESSON - 17

CSS Flexbox

display: flex ek CSS property hai jo kisi container ko Flex Container bana deta hai. Iska use elements ko easily align aur space karne ke liye hota hai — horizontal (row) ya vertical (column) direction me.

Flex Container ki Important Properties:

- **flex-direction :**

Direction set karta hai (row, column, column-reverse, row-reverse)

- **justify-content :**

X-axis (main axis) par alignment (normal, center, left, end, flex-start, flex-end, space-around, space-between, space-evenly)

- **align-items :**

Y-axis (cross axis) par alignment (normal, center, left, end, flex-start, flex-end, baseline, self-start, self-end)

- flex-wrap :

Items wrap hon ya na hon

- gap :

Items ke beech space
